

Acoustics Software IP 3D Surround Sound Solution

Spatial acoustics technology that provides an amazing sense of presence

Socionext has developed "3D surround sound technology" for providing a sense of presence in the reproduced sound by making full use of spatial acoustics technology. When applied to gaming devices or digital signage equipment, this technology can enhance the sense of presence in the game or increase the effectiveness of signage advertisements, thereby making the sound reproduction with products using the technology more attractive.

This technology, which has already been used in game software products from famous manufacturers, has an extensive track record of selling in the market.

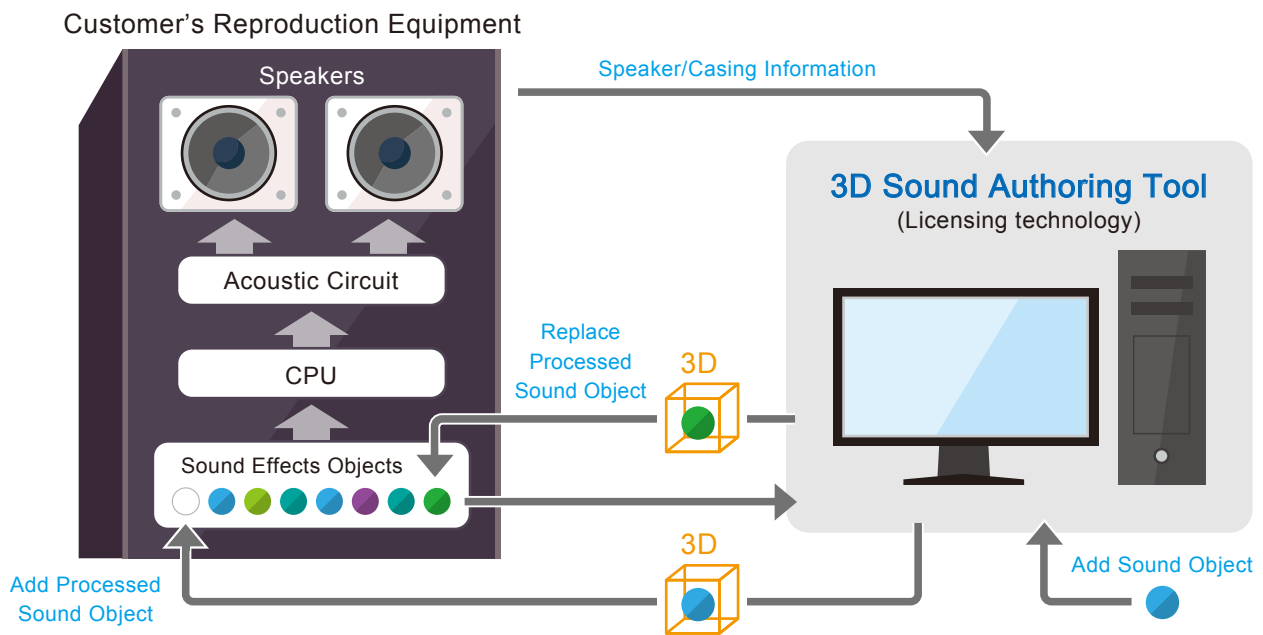

■ Features

- Provides listeners an amazing sense of presence as if the sound source was close to their ears.
- Controls the direction of the sound coming from the speakers with only the front speakers.
- Requires no hardware modifications because you only need to play back sounds processed with a 3D sound authoring tool.

■ Applications

The technology can be applied to a wide range of products, including gaming consoles for home-use, gaming devices, digital signage equipment, and arcade games.

■ Illustration of Use of Technology in Customer Environment

- You only need to process a sound object into a 3D sound object to obtain 3D surround sound effects.
- We will provide a 3D sound authoring tool tuned to suit your reproduction equipment.

■ Examples of Product Applications

Gaming devices

Enhances the sense of presence with 3D sound.

Digital Signage Equipment

Increases the effectiveness of signage advertisement with whispers and sound effects.

The Products and product specifications described in this document are subject to change without notice for modification and/or improvement. At the final stage of your design, purchasing, or use of the products, therefore, ask for the most up-to-date Product Standards in advance to make sure that the latest specifications satisfy your requirements.
